INSTRUCTIONS

For Trend Worktop Jigs using a 30mm guide bush and 1/2" (12.7mm) diameter cutter.

INTENDED USE

This accessory is intended to be used with Trend Kitchen Worktop Jigs which use a 30mm guide bush and a 12.7mm diameter cutter to mark the worktop offset of 8.65mm using a spring loaded pencil. This is especially useful if there is a joint at either end of a worktop as it will make it easier to mark out for the cut.

OPERATION

The Offset Scriber can be used to trace the male cut on the worktop. The drawn line will need to be on the side that the jig is to be positioned for routing. For a right hand joint the pencil line needs to be on the underside of the male worktop. Eg. For a left hand joint the pencil line needs to be on the top of the male worktop.

Cut female joint as normal following the instructions supplied with the worktop jig, then lay male piece on top for right hand joint or underneath for left hand joint.

Use the Offset Scriber to trace the female cut by pushing the tool body down so the spring loaded pencil contacts the worktop. The pencil line on the centre worktop will show the final cut line.

If the worktop is dark, place masking tape on worktop and draw onto this.

Lay jig onto worktop and align the correct edge of the slot on the jig to the pencil line, clamp jig securely and then cut the male joint following the instructions supplied with the worktop jig.

Hint: Marking out is easier for left hand joints.

SAFETY

Users must be competent in using woodworking equipment before using our products. Consider working environment before using tools. Ensure working position is comfortable and component is clamped securely.

Please keep children away from tools and work area. All tools have a residual risk so must therefore be handled with caution.

MAINTENANCE

Use only Trend original spare parts and accessories.

Keep pencil sharp.

Regularly clean with a soft cloth. No additional lubrication is required.

After use keep product assembled and return it to its packaging for safe storage.

ENVIRONMENTAL PROTECTION

Recycle raw materials instead of disposing as waste. Packaging should be sorted for environmental-friendly recycling. The product and its accessories at the end of its life should be sorted for environmental-friendly recycling.
