before use

**CASE FOR ROUTER CUTTERS
REF. CASE/5**

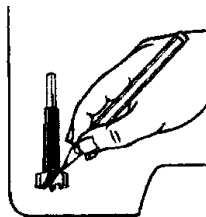

Thank you for purchasing this Trend Storage Case which is designed for people who have made a considerable investment in router cutters and wish to protect them safely. It is supplied with a foam base which will require cutting to fit your range of router cutters and tools.

Instructions

1. Remove thick foam base foam from case. Place on large sheet of paper (A3+). Draw around block with pen or pencil.

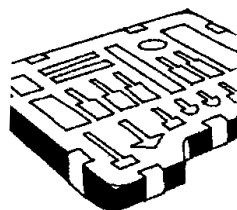

2. Lay out your router cutters and tools within traced area on paper. Trace, or mark key points and link to produce accurate outlines of your cutters planned out in their desired positions.

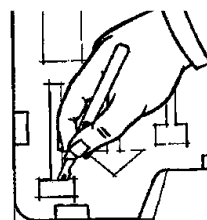

3. Fix paper in position on thick foam base,

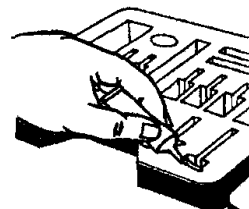

using masking tape or low tack adhesive.

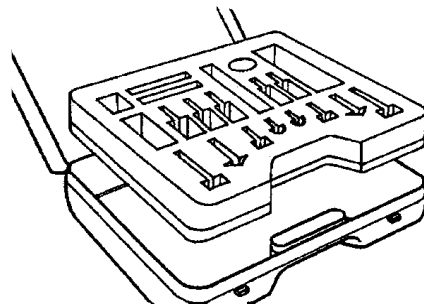

4. Place foam base on a cutting board on a firm, flat surface. Cut out shapes through paper and foam with a sharp, thin blade. Keep blade upright (90 degrees) and cut inside the lines that you have drawn to ensure a snug fit for your cutters and tools.

5. Remove paper and excess foam.

6. Apply contact adhesive to underside of thick foam base. Press firmly in place on thin, dense foam base section. When glue is set, place completed base back into case, (this can be glued into the bottom of your case if desired). Your custom-made storage case is now ready to use.
