

INSERTING THE COLLECTION BAG 

- Insert the collection bag into the container with the opening towards the front of the vacuum cleaner.
- Turn bag through 90°. Pull the collection bag opening over the container deflector flange ensuring the collection bag opening passes over the ridge on the container deflector. The card reinforcement will need to bend slightly to ensure that collection bag is pushed tight to the interior wall of the container.
- Carefully rotate bag so card reinforcement is uppermost.
- Check that the collection bag card reinforced opening is completely tight against the interior wall of the container. Fold out the rest of the disposal collection bag downwards into the container.
- Reattach the vacuum head again, ensuring power cable is not fouling or trapped, and lock the container catches.
