

# Trend EasyScribe

The legs are adjusted via this wheel

The leg extends to suit the work being scribed

A rectangular profile lead is used

**S**cribing to an edge is simple enough with a gauge block and pencil, but I suppose there's always room for a gadget if it does the job. This one has an adjustable compass-like action using the centre wheel to scribe between 1 and 40mm. The flat steel leg sits to the wall or edge to be scribed and adjusts for length to locate behind the scribed surface if it sits flush or above the scribed area.

Pencil leads are supplied, and are available as spares which is a good thing as

The tool is simple to use and works well for general scribing tasks

these are flat profiled; a round one would have been better to my mind but I guess it's to make sure you buy the appropriate accessories direct from the manufacturer!

Either way, it seems to do a decent enough job in general scribing work, and the adjustability factor makes it ideal if you need to scribe specific depths, to gain a quirk margin for example.

**Price:** £29.99
