Trend D60 digital depth gauge

A useful addition for any router table for setting cutter height as well as fence backset, this digital gauge has both fractional imperial and metric displays accurate down to 0.1mm.

The legs span a 60mm aperture and will set depths or backsets up to 80mm, and a plastic pointer clips onto the rule allowing depths to be checked, useful for existing

work, rebates, mortises and so forth, but limited to 50mm.

It's very simple to use; three buttons power up and cycle through the functions, and there is a magnet in each foot to keep it in position on a cast or steel surface.

Price: £22.00
